## Wednesday Challenge Form

Group Members: Hunter Lee, Moses Apostol, Eric

**Problem Statement:** With candy corn, try to estimate how much candy corn will it take to cover an 8 ½ x 11 paper.

**Approach:** We knew that the answer was to create an array of candy corn. Measuring the base of the candy, we found it to be a ½ of an inch. We then measured the size of the page and counted each half inch. We then multiplied the edges, just like an array. We got 828 candy corn.

**Solution:** The real answer was 496 candy corn.

**Lessons Learned:** When you need to estimate, You need to be careful with the measurements.
